

Humo

Quantity	Description
9	Laser cut parts
1	120 mm PC fan
4	PC fan screws
1	Fan grill
1	Solder-fume filter
1	DC-DC step-up converter

Difficulty: ●●○○○ Build-Time: 30 – 60 Minutes

Manual v2.0 CC BY-SA 4.0 Binary Kitchen e.V.
Board v2.0 CC BY-SA 4.0 Timo Schindler

Safety Information

- ATTENTION: Not suitable for children under 3 years, choking hazard due to small parts that may be swallowed.
- We recommend: Supervision of the assembly and soldering process by an adult.
- Keep these operating instructions in a safe place for later use! It contains important information.
- If the battery is empty, replace it only with a new battery with the same values.
- When soldering, the soldering iron, the solder and also the components being soldered become very hot.
- Always wear safety glasses when soldering and assembling the kit.
- Always use a fire proof soldering pad when soldering! This prevents the components from slipping away.
- To keep the soldering iron safe during assembly, always use a suitable soldering stand.
- The kit is designed for USB power only. Use appropriate power supply.
- CAUTION: Never connect the kit to 230 V mains voltage! There is an absolute danger to life!
- Please take the device to appropriately certified disposal companies at the end of its service life. This is good for the environment and ensures correct disposal.
- Subject to changes and errors.

Disposal

This appliance is labelled in accordance with the European Directive 2012/19/EU on waste electrical and electronic equipment (WEEE). The directive provides the legal framework for the take-back and recycling of waste equipment throughout the EU.

- **packaging:** The packaging is made of environmentally friendly materials and is therefore recyclable. Dispose of packaging materials that are no longer needed accordingly.
- **waste equipment:** Old appliances often still contain valuable materials. Therefore, hand in your old appliance to your retailer or a recycling centre for reuse. Please ask your retailer or your local authority for the current disposal routes.

Step 1

- a) Check your parts.
- b) Clean the wooden parts with sand paper.
- c) Hint: For glueing the wooden parts, use tape to hold the parts in place.

Step 2

- a) Cut away the connector from the fan. The cable on the fan needs to be as long as possible.

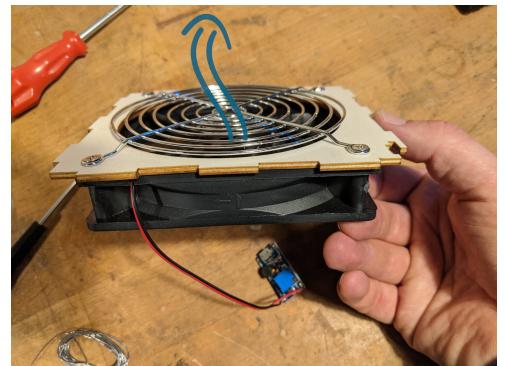

Step 3

- a) Solder the red cable of the fan to the OUT+ soldering point of the DC-DC step-up converter
- b) Solder the red-black cable to the OUT- soldering point.

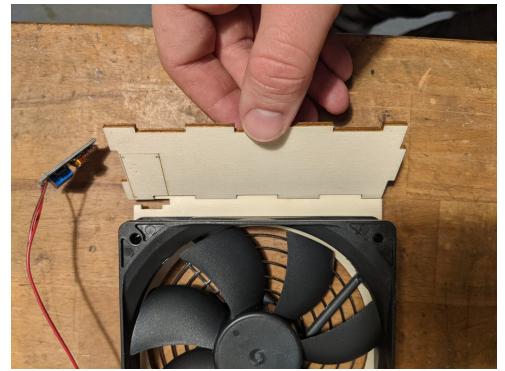

Step 4

- a) Use the fan screws to screw the fan grill and the laser cutted backpanel to the fan.
- b) The airflow of the fan (see the arrow on the side of the fan) should flow from the black fan body into the direction of the fan grill.
- c) The cable should be on the left side and the special cutout (for later hold for the usb power connector) at the corner should be on the right side (see picture).

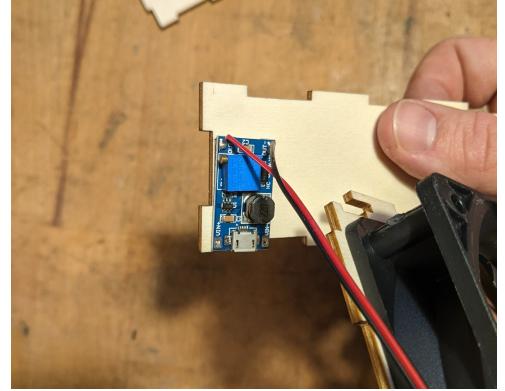

Step 5

- a) Take the wooden part with the outline of the DC-DC converter printed on. In the next step we will assemble this to the bottom of the backpanel. The line out an the cut out should match. Do not assemble yet (see next step).

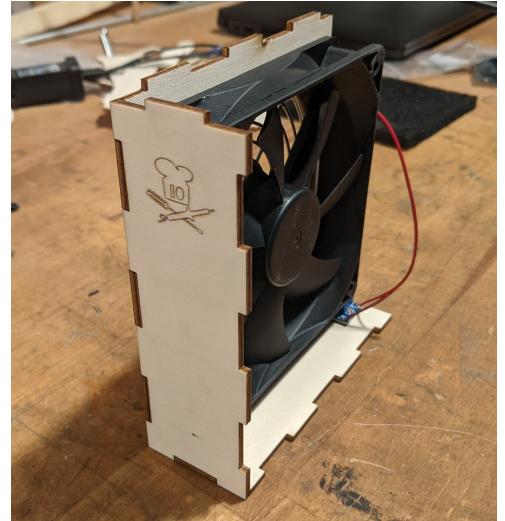

Step 6

- a) Glue the DC-DC step-up converter to the wooden part as printed on.
- b) Attach and glue the wooden bottom-part to the backpanel where the DC-DC converter is attached. Like prepared in the previous step: The line out an the cut out should match.

Step 7

- a) Glue the wooden side panel to the backpanel with the logo directing to the outer side.

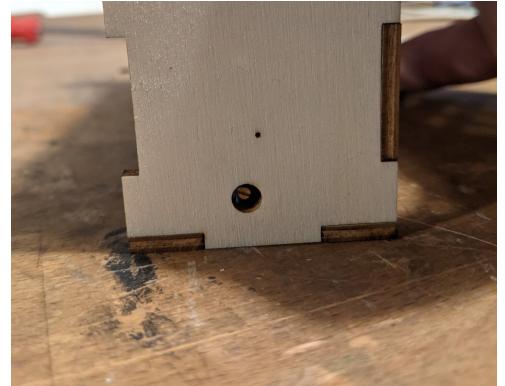

Step 8

- a) Watch for the cable. It should run along the side of the fan.

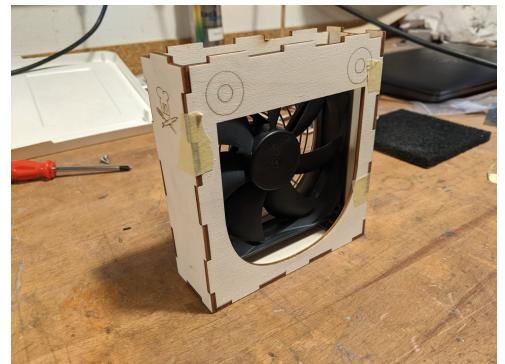

Step 9

- a) Glue the wooden side panel to the backpanel with the hole directed to the bottom.
- b) The adjustment screw of the DC-DC converter should be accessible through the hole.

Step 10

- a) Glue the front panel to the Humo.

Step 11

- a) Cut the solder-fume filter to the correct size (use the spacer as pattern).
- b) Add solder-fume filter and the spacer to your Humo.

Step 12

- a) Put in the top cover of humo.
- b) Do not glue it to Humo so you can change the solder-fume filter from time to time.

Step 13

- a) Screw the arms to your Humo.
- b) You are finished!
- c) Plug in some power cable and adjust the fan speed (with the screw on the side).
- d) It should not run on the maximum speed. This can damage the fan! Half the speed is perfectly fine :).
- e) You can also finish the wooden surface now with oil (linseed oil) or varnish, but this is optional.
